Harness City at Level 3, all assets

Top-down plan in city grid units (1 cell = 1 unit, north up). Update 2: airport moved west, mall, northern industry. Green shapes exist today and are read from the code. Orange shapes are planned and positions are proposals. Positions marked ~ are approximate.

☑ Existing ☑ Planned ☑ Traffic ☑ Conflicts

☐ Existing ☐ Planned Highway Rail Traffic route Conflict

Conflicts found

ID	WHAT COLLIDES	PROPOSED FIX
C6	The core connector at z8 now carries city traffic, airport entry and the rail-side road in a 3-cell gap between airport (z1-7)	Keep one road at z8; mall entry stays on the highway side.

Traffic on this map

ROUTE	PATH
Goods truck	Industry, industry land road, highway south, mall entry with toll gantry, mall. Slows on the ramp.
Core car	City east gate along z8 to the

	between airport (z17-7) and mall (z11-17).	
C7	Decided: the airport moved 2 cells east (airport x45-61, station x37-43), so the station sits 3.5 cells outside the city edge (x33.5). The rail line ends at the station.	Done in the grid and in DESIGN.md.
C8	The west-east power line passes through the old airport spur gap where it climbs to the airport.	Route the airport branch at x49 and put a pylon either side of z8.
C9	Tunnel: z-30..-22 under the mountains, portal at z-22 (frame x61.5-70.5). Industry (z-18..-8) keeps 4 cells to the portal.	Industry road joins the highway south of the portal at z-6.

	highway. Both directions.
Airport car	z8 connector to the airport entry at x53.
Harbor truck	Highway south, harbor spur west over the bridge section, quay.
Armored car	Bank back to city road z8 and the secrets scanner.
Ships and planes	Free headings across water and air, not tied to roads.

Decisions and what is still open

Decided now	Airport and station moved west (station x37-43, airport x45-61). City core gets a connector to the highway. Supermarket renamed Shopping Mall. Industry moved north with a land road to the highway. Power line reaches harbor, airport and industry.
Decided before	Highway follows the score tier: narrow below L2, as drawn from L2. Tunnel under the northern mountains (z-30..-22, portal at z-22), bridge on pillars over the harbor water. Bus from the central station to the civic quarter, subway too at L2+. Camera stays isometric with rotate buttons.
Still open	Central station position is approximate. Rail no longer crosses the highway, so pillars are only needed at the harbor bridge.

Repo rules apply to the build: DESIGN.md changes first, registry and click text per object, demo data covers each level, no random in placement, then rehash and run the checks.
